Platform Build

Support for both Windows and Android is a must for sharing the Mod to the community. Here is a quick way for you to build two platforms without switching the platform.

Suppose you have a Mod project with Windows build platform here. And, you want to build Android platform now.

First, create a folder somewhere else.

Then, open the cmd and cd to that folder.

```

Windows PowerShell
PS E:\Projects\PanzerWar-Lit-Mod\UnityProject-Android> cmd
Microsoft Windows [Version 10.0.18362.239]
(c) 2019 Microsoft Corporation. All rights reserved.

E:\Projects\PanzerWar-Lit-Mod\UnityProject-Android>mklink
Creates a symbolic link.

MKLINK [[/D] | [/H] | [/J]] Link Target

    /D      Creates a directory symbolic link. Default is a file
             symbolic link.
    /H      Creates a hard link instead of a symbolic link.
    /J      Creates a Directory Junction.
    Link    Specifies the new symbolic link name.
    Target  Specifies the path (relative or absolute) that the new link
             refers to.

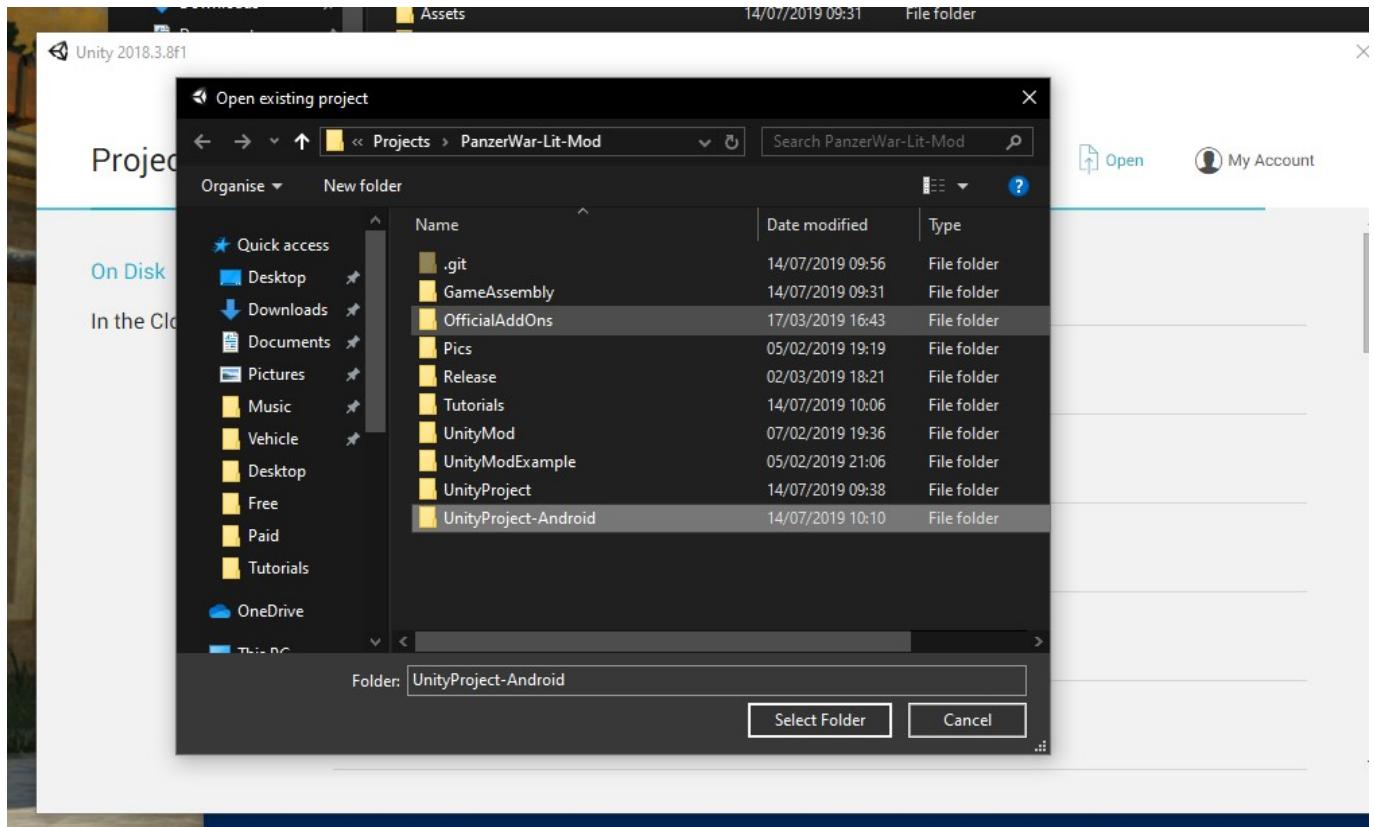

E:\Projects\PanzerWar-Lit-Mod\UnityProject-Android>mklink /D Assets E:\Projects\PanzerWar-Lit-Mod\UnityProject\Assets
symbolic link created for Assets <==> E:\Projects\PanzerWar-Lit-Mod\UnityProject\Assets

E:\Projects\PanzerWar-Lit-Mod\UnityProject-Android>mklink /D ProjectSettings E:\Projects\PanzerWar-Lit-Mod\UnityProject\
ProjectSettings
symbolic link created for ProjectSettings <==> E:\Projects\PanzerWar-Lit-Mod\UnityProject\ProjectSettings

E:\Projects\PanzerWar-Lit-Mod\UnityProject-Android>

```

Make a folder link.

Then, you can open this folder in Unity and the files are the same all the time as what in your Windows project. Then you can switch its platform to Android.
